

Lithium iron phosphate battery series

Lithium iron phosphate battery is a kind of lithium-ion battery using LiFePO_4 as the cathode material, with the following characteristics:

- High safety performance, no explode or burn, 600 L3 decomposition temperature
- Long cycle life, over 8000 times, much higher than lead-acid, nickel-metal hydride and other batteries
- High-current charge and discharge performance, fast charging and high power output
- Wide operating temperature range, can be used in the environment of -20L3 to 60L3
- Environmentally friendly and non-polluting, no heavy and rare metals

The NETC's products have significant advantages in safety, energy consumption, cycle life, cost and fast-charging capability.
